This listing of claims will replace all prior versions, and Listings of Claims in the

application:

**Listing of Claims:** 

Claim 1 (Original): A transport-independent real-time transport protocol (RTP)

stack, comprising:

a transport-independent tasks module, wherein the transport-independent tasks

module includes methods that are independent of an underlying transport layer; and

a connector module in communication with the transport-independent module,

wherein the connector module includes methods that are dependent on the underlying transport

layer.

Claim 2 (Original): A transport-independent RTP stack as recited in claim 1,

wherein the connector module includes data input and output methods.

Claim 3 (Original): A transport-independent RTP stack as recited in claim 2,

wherein the data input and output methods are utilized by the transport-independent tasks

module to communicate with the underlying transport layer.

Claim 4 (Original): A transport-independent RTP stack as recited in claim 3,

wherein the data input and output methods include an RTP output stream method that returns

an RTP output stream to a calling method.

Claim 5 (Original): A transport-independent RTP stack as recited in claim 4,

wherein the data input and output methods include an RTP input stream method that returns an

RTP input stream to a calling method.

Claim 6 (Original): A transport-independent RTP stack as recited in claim 3,

wherein the data input and output methods include a real-time transport control protocol

(RTCP) output stream method that returns an RTCP output stream to a calling method.

Claim 7 (Original): A transport-independent RTP stack as recited in claim 6,

wherein the data input and output methods include an RTCP input stream method that returns

an RTCP input stream to a calling method.

Claim 8 (Original): A real-time transport protocol (RTP) connector module,

comprising:

an RTP output stream method that returns an RTP output stream to a calling method;

an RTP input stream method that returns an RTP input stream to a calling method;

a real-time transport control protocol (RTCP) output stream method that returns an

RTCP output stream to a calling method; and

an RTCP input stream method that returns an RTCP input stream to a calling method.

Attorney Docket No: SUNMP025

Claim 9 (Original): AN RTP connector module as recited in claim 8, wherein the

RTP connector module generates transport-independent input/output streams.

Claim 10 (Original): AN RTP connector module as recited in claim 9, wherein the

transport input/output streams provide access to a particular type of underlying transport layer.

Claim 11 (Original): AN RTP connector module as recited in claim 10, wherein the

RTP connector module is in communication with a transport-independent tasks module,

wherein the transport-independent tasks module includes methods that are independent of the

underlying transport layer.

Claim 12 (Original): AN RTP connector module as recited in claim 11, wherein the

transport-independent tasks module processes the transport-independent input/output streams

using transport-independent operations.

Claim 13 (Original): A transport-independent real-time transport protocol (RTP)

stack, comprising:

a transport-independent tasks module having an RTP transmitter module and an RTP

receiver module, wherein the RTP transmitter module and the RTP receiver module are

independent of a first underlying transport layer; and

a connector module having an RTP output stream method in communication with the

RTP transmitter module, and an RTP input stream method in communication with the RTP

receiver module, wherein the RTP output stream method and the RTP input stream provide

access to the first underlying transport layer.

Claim 14 (Original): A transport-independent RTP stack as recited in claim 13,

wherein the RTP output stream method returns an RTP output stream to the RTP transmitter

module.

Claim 15 (Original): A transport-independent RTP stack as recited in claim 14,

wherein the RTP input stream method returns an RTP input stream to the RTP receiver

module.

Claim 16 (Original): A transport-independent RTP stack as recited in claim 13,

wherein the transport-independent tasks module further includes a real-time transport control

protocol (RTCP) transmitter module and an RTCP receiver module.

Claim 17 (Original): A transport-independent RTP stack as recited in claim 16,

wherein the RTCP transmitter module and the RTCP receiver module are independent of the

first underlying transport layer.

Claim 18 (Original): A transport-independent RTP stack as recited in claim 17,

wherein the connector module further includes an RTCP output stream method that returns an

RTCP output stream to the RTCP transmitter module.

Claim 19 (Original): A transport-independent RTP stack as recited in claim 18,

wherein the connector module further includes an RTCP input stream method that returns an

RTCP input stream to the RTCP receiver module.

Claim 20 (Original): A transport-independent RTP stack as recited in claim 18,

wherein the connector module can be modified to operate utilizing a second underlying

transport without modifying the transport-independent tasks module.
